FUNDING

1. **National Science Foundation Innovation Corps** 10/2020-4/2021
Improving the controllability and stability of neuroendovascular devices
 This project involves collecting survey data and conducting interviews with neurosurgeons and other endovascular specialists in order to better understand the common shortcomings of devices used in neuroendovascular procedures.
 Role: PI
2. **Undergraduate Research & Creative Opportunities Grant** 4/2016-4/2017
Differences in contingent negative variation (CNV) when using social dilemma strategies

This project employed wireless electroencephalography (EEG) and analysis of event-related potentials to explore the neural signatures of cooperation and defection in simulated social dilemmas.

Role: PI
